

# Comment Card

**QUESTION ONE:** Please use the map to the right to respond to this question.

- A. First, please put a **check mark (✓)** in the box next to the portion of the study area in which you live.
- B. Then, if you own multiple properties, please **circle the letter/letters** for your additional properties.

A	<input type="checkbox"/>	D	<input type="checkbox"/>
B	<input type="checkbox"/>	E	<input type="checkbox"/>
C	<input type="checkbox"/>	F	<input type="checkbox"/>

**QUESTION TWO:** Based on input collected from the public and experience on comparable projects, Expressway 1 & 2 are the recommendations for the proposed outer loop facility type. This would provide acceptable levels of mobility between major roadways such as IH 35 and SH 46 and would also allow the study team to reduce right-of-way needs in environmentally sensitive areas.

	Access to Mainlanes			Design Aspects						
	Access to Major	Access to Minor	Driveway Access	Grade Separation at Major Crossroads	Median		Frontage Roads	Signalization	Design Speed (mph)	Average Right Of Way width
					Type	Openings				
Urban Arterials										
Expressway 1	✓			✓	CTB		✓		50 (min)	450 ft.
Expressway 2	✓			✓	CTB				50 (min)	300 ft.

CTB – Concrete Traffic Barrier

**Do you agree or disagree with the recommendation? Why?**

---

---

---

**QUESTION THREE:** Based on the recommended facility type, a corridor width of 800 feet is recommended. This is not to be confused with the ultimate right-of-way width which is considerably less. The corridor width is meant to allow enough room for future environmental studies to analyze multiple alternatives within the 800 feet. This would allow TxDOT to further minimize environmental impacts.

**Do you agree or disagree with the recommendation? If you disagree, what corridor width would you recommend and why?**
